Macon MR6 Rear Uprights

Rating: Not Rated Yet

Price:

[Ask a question about this product](#)

Description Macon MR6 rear upright castings available ex stock. These rear uprights were fitted on several Formula Ford cars including Macon MR6, Jomo and early Dulon cars. These uprights are cast from Aluminium LM25 heat treated to TF condition. Their strength is improved over the originals by the use of smaller core print holes and additional internal webs. The uprights come fully machined and black anodized. The brake caliper mounting threads are 7/16 UNF and suit Girling 14LF or 12SP brake calipers. PA Motorsport also manufacture axles and hubs to suit these and other uprights.
